LISTEN TO OUR INNER WEATHER, OUR ECOSYSTEM OR UNDERSTAND OUR BODY IN AN ALTERNATIVE WAY

To understand our body in an alternative way, we need to take several factors into account.

It is important to be interested in our lifestyle, our education, our culture, our origins, our physical body and its metabolism, in a word everything that is MATERIAL. And on the other hand, it is equally important to take into account our soul, our spirit, our emotions, as well as everything that constitutes our environment, that is to say our home, family, friends, our professional life, our neighbours...

Considering all these parts of ourselves is capital, in order to apprehend who we are and understand ourselves from a completely different angle, taking into

account our history and the memories that we convey, in what constitutes our subtle, invisible, energetic and vibratory identity.

For example, you enter a room with a sumptuous decor and yet you have an impression of uneasiness, disturbance, you perceive a heavy atmosphere and the atmosphere seems heavy to you. This is the very succinct definition of this notion of energy, of a vibration that you perceive, that the subtle part of being will feel. This subtle part that captures the information that we will be interested in in order to know how to dialogue with it.

Water is the major element that forms us, the rest is only matter and energy. The body functions like a very well tuned clock, which can be compared to a perfectly synchronized symphony orchestra. In other words, it works like a spinning-top in balance when everything goes well, but as soon as an irregularity occurs, the spinning-top goes out of balance. At this point appear symptoms and subsequently disease

It is then necessary to restore the good functioning of our body with a whole bunch of actions at all levels so that it rebalances and resynchronizes itself to take again the metaphor of

the top with the whole of its rotation at its original speed.

Here's another example: when you play with a hoop everything is balanced thanks to a certain speed, as soon as you slow down or accelerate, you introduce a state of unbalance which reflects itself on the whole body and simultaneously generates an unconscious compensation which will have on a more or less long term certain consequences on the whole body. In the majority of cases this compensation occurs mainly following a brutal emotional shock, whether it is in utero, during the first years of life, or possibly later.

It may be a bereavement, an illness, a move and even a happy event. In utero, it is a memory sometimes difficult to identify because parents do not always take certain events seriously or simply these events are hidden.

According to Doctor Pierre Jean-Thomas Lamotte, a neurologist for whom there exists an «unconscious symbolic compensation» which originates beyond our knowledge, this process

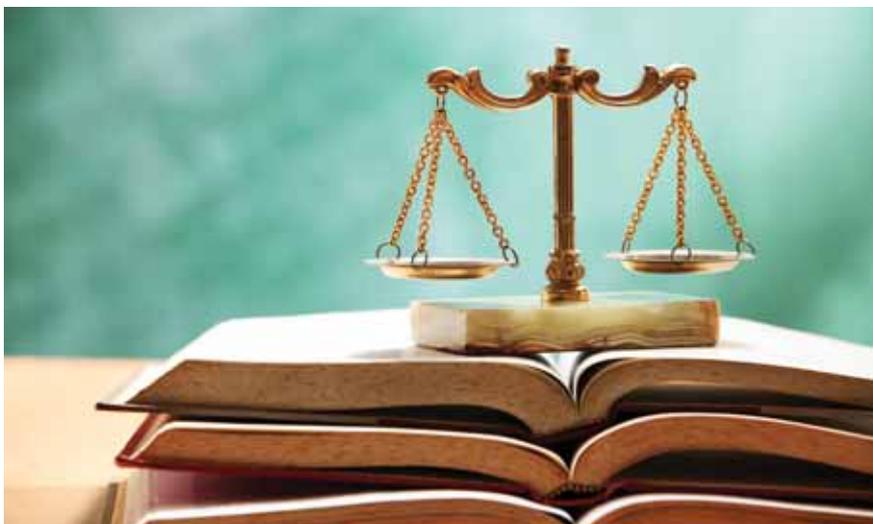

«restores a balance» when the compensation cannot be formulated. It then expresses itself in various ways: diseases, accidents or even no event at all... He declares, and I quote, «The human Being lives literally and on a permanent basis in a compensated past».

By exploring, then, each person's personal story when declaring an illness, or accident... by looking at transgenerational memories, or an emotion not expressed because during the traumatic event, the words to say it missed. So the disease would appear as a symbolic compensation for this unexpressed suffering.

«The simple fact of understanding this mechanism would already enable us to avoid diseases,» says Pierre Jean-Thomas Lamotte in his various works

The objective is always to succeed in keeping the balance at all levels; this is essential to allow us to maintain excellent vitality while avoiding to compensate in an extreme way.

And this is where alternative, informational medicine comes in, it's by searching for the causes of these shocks that we can deprogram in order to reprogram our own life history and evolve with more serenity.

EVERY MUSCLE AS WELL AS EVERY ORGAN REACTS WITH A THINKING MECHANISM

This update is all the more important as it relieves the individual of guilt about his history.

To the expression: «from communication springs Light», I would add that Light is life and that it is important to communicate to our being as a whole the good information that we possess that comes from our gut, our heart and our mind. It is therefore fundamental that all these parties express themselves so that we can have a good dialogue with ourselves and with others, and this, with kindness, is how we will be able to circulate all the forms of energies that I would call informational.

These informational energies are constantly in motion and when they reach saturation the individual expresses them, for example

by a burnout, or by various pathologies (locomotor, metabolic and psychological problems).

I compare these movements of informational energies to meteorology, because the latter is often changing (sun, tsunami, rain, storm, wind, snow, hot, cold...) and we have this weather inside us; it expresses itself through joy, anger, love, hate, opposite feelings that animate us. So it's a real personal ecosystem. To maintain balance, we must therefore be careful to what is happening inside us so as to create the best, but also be careful to our external environment, to what we emit and receive, in order to protect our creation.

This environment, whether

it is inside or outside, has an inescapable importance. Indeed, let us remember that in the embryonic state we are «already conditioned» because in the womb of our mother, we bathe in the amniotic liquid which is composed at 99% of water; it is our first home, it will impregnate us with the whole family patrimony. It is for this reason that before conceiving a child I advise to be as «clean» as possible, which means to have cleaned as well as possible the family history. It is at this moment that our basic program, our operating system installed «on a blank hard disk» is shaped, and it is precisely the content of the basic program that interests us, because, as already said, this one is conceived in water and it is for this reason that it is through water itself that such a program can be modified.

This environment, whether it is inside or outside, has an inescapable importance. Indeed, let us remember that in the embryonic state we are «already conditioned» because in the womb of our mother, we bathe in the amniotic liquid which is composed at 99% of water; it is our first home, it will impregnate us of the whole family patrimony, it is for this reason that before conceiving a child I advise to be as «clean» as possible, that is to say to have cleaned as well as possible the family history. It is at this moment that our basic program, our operating system installed «on a blank hard disk», is shaped, and it is precisely the content of the basic program that interests us because, as already said, this one is conceived in water and it is for this reason that it is through water itself that such a program can be modified.

WATER, ITS MEMORY A VIBRATORY INFORMATIONAL SUPPORT

Water is the most widespread element on earth as in our own body whose water content is between 70 and 90% depending on age, but especially 99% molecular to maintain its vitality. Water is intrinsically part of us, we can survive long without eating, but not without drinking, in fact we can consider that :

WATER IS LIFE

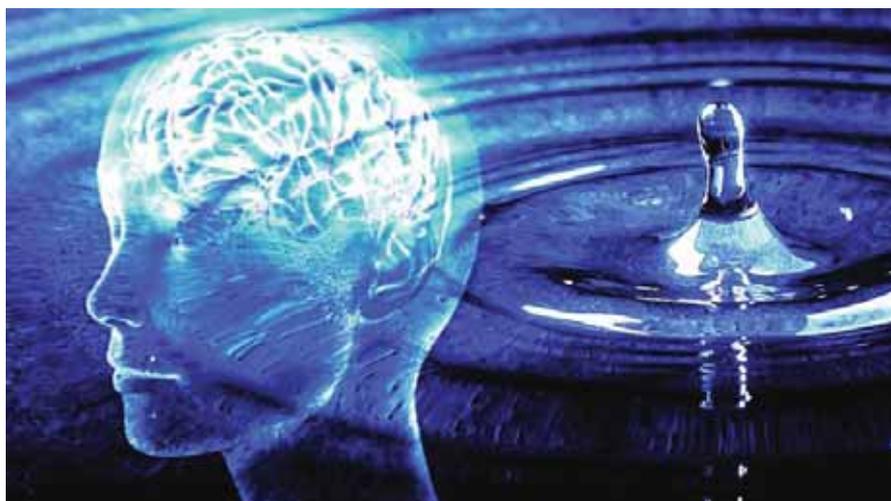

We must drink more or less 2.5 litres of water a day, knowing that when we take a bath or shower we absorb about 1.5 litres.

But what does it reveal to us this water, we know that it has already been studied in detail, has extraordinary physical and che-

mical characteristics compared to other liquid substances but especially, it is in 1988 that the incredible hypothesis was stated :

THAT THE WATER WOULD HAVE A MEMORY

Experiments around the world have confirmed that water has the capacity to receive and record the imprint of all external influences memorizing everything that happens in its immediate environment. One more reason, to remind you dear parents, I strongly advise you to clean memories as much as possible before conceiving a child.

DOCTOR JACQUES BENVENISTE, THE ORIGIN OF HIS DISCOVERY IN 1988

Doctor Jacques Benveniste

Here is the precise transcription of the remarks by Doctor Jacques Benveniste, who is at the origin of this discovery on the memory of water in 1988. They are simple and very clear.

Doctor Jacques Benveniste declares during an interview on television.

« The fact that a liquid like water which is considered simple, in any case common when in reality it is extraordinarily complex, can reproduce the activity of complex molecules, has struck considerably the community of biologists.

We can dilute any of the lab reagents we use. At the time, we were a research lab on allergy. So, now we have a product that triggers allergy at will, in our jargon we call it an anti-IGI antibody, but we can choose any other product, and this diluted product therefore should no longer trigger allergic phenomena in the in vitro test tube, as we say. In fact, after the surprise, followed by years of work to understand the phenomenon, we discovered that this product still continued, (we go on doing dilution experiments from time to time), to exert an effect even when it has disappeared from the tube.

The fact that we can observe an activity in a liquid that no longer contains molecules could make us think, and I believe it's true, that everything happens as if, like we say in mathematics, water remembered having seen this molecule. Hence the pictorial expression, which is important: it's not water, it's the message that molecules leave in water, and that's what we worked on later.

The experience that Jacques Benveniste presents is that of an isolated heart coming from a guinea pig, and this pig has been made allergic to ovalbumin, which is egg white. This heart is a very sensitive organ which will detect in a very fine way, as in all allergic systems, the slightest trace of egg white. When we introduce a certain dose of ovalbumin, the heart reacts with an allergic shock. If we introduce what we call digital ovalbumin, the heart does not make the difference between digital ovalbumin and the real ovalbumin,

in the same way that our ear does not make the difference between a digital sound written on a compact disc and the real person speaking or singing, it seems like exactly the same sound. So why the digital? It comes ultimately but it is the great great-granddaughter of the memory of water. We said that what is important in the memory of water is not the water, it is what is written on the water, and the research we have done in the years that followed (1982, 88 and 91), have shown us that this activity written on water can be erased by a magnetic field in the same way you can erase with a magnet what you recorded on a magnetic tape without influencing the speech when it comes out of the mouth.

The next step was to transfer this magnetic information by means of an amplifier as we do for sound, and we realized that we managed to transfer it on a sound band (i.e. a band between 0 and 20 kHz to be schematic).

It is therefore the band we generally use to talk, to phone or to make music, although we carry this specific activity from one tube to another through a wire. We have taken an additional step, which is to declare that since it was a sound, since molecules finally speak to each other through sound waves, they speak to each other as we speak to each other through vibrations and they resonate if they have the same vibration. We recorded this on a computer hard disk through a sound card as we can do with a multimedia computer. The next step we have now realized, that we realize in routine, is obviously to transfer these files from computer to computer by Internet, exactly like any other file.

There are two consequences for the medicine of the future: the first one is that the drug can be administered by phone, listed on a smart card. Not the name of the drug nor its structure but its activity. We must acquire this principle once and for all, which is that a molecule is simply biologically active in its function of signal, and simply a transmitter of kilohertzian waves.

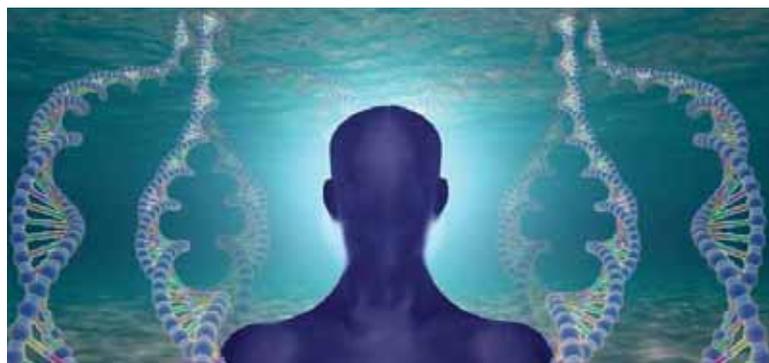

So from there on, the molecule itself has no importance whether it is the shape of Pavarotti's, Callas's or Johnny Hallyday's larynx. That's unimportant to us.

What interests us is what comes out of it, mainly the sounds.

Therefore the important point is what comes out of the molecules. Those are the sounds that the molecule sends to communicate with the specific molecule with which it can communicate by a resonance system that is the same one we use in wireless to transmit waves at distance.

I think that the drug molecule, except perhaps in some very narrow indications, will serve as an example, like having calcium really hard in the bones. It is not a signal function, but very quickly the drugs as we know them will become digital and I think we will even use frequencies.

A very simple example: you take a bacterium, we can imagine that we will record its frequency spectrum and send back to the bacterium its frequency spectrum in opposition to the phase and the bacterium will not be able to communicate with the outside and therefore will die. It is currently practiced in airplanes: we take the sound, we send it in phase opposition and the result is silence. Since by sending the opposite phase to a sound we obtain zero result, we can imagine a completely electromagnetic medicine of the same type which will obviously take much more time. But nowadays the technical means are already at our disposal. »

THE DNA TRANSDUCTION EXPERIMENT

This experiment, which is a true scientific discovery and advance, is very eloquent because it allows us to highlight the great power of information capable of stopping harmful bacterial activity and understand it is the signal that contains the information and not its support, a point which is crucial.

This discovery also provides answers and clarifications on alternative, informational and vibratory medicines.

A few years later, thanks to today's computer and electronic technology, Professor Luc MONTAGNIER, 2008 Nobel Prize winner for Medicine and co-discoverer of the AIDS virus, will take over Dr Jacques BENVENISTE's work, presenting it in detail on «France Télévision».

This intervention will complete the remarks described in the previous paragraph. So here is the transcript of this experience he named: «an experiment in DNA transduction».

PROFESSOR LUC MONTAGNIER AND HIS DNA TRANSDUCTION EXPERIENCE SHOWN ON «FRANCE TELEVISION»

Starting from the DNA of a patient infected with AIDS, the professor and his team will create a digital file and then send it over the Internet to another laboratory where the DNA will be reconstituted from the file. The professor calls this «transduction», one could almost call it «teleportation».

To detail further the experiment: a DNA carries all the information necessary for the development and functioning of an organism, for man as well as for a fungus or a bacterium. Each DNA is unique and, as an identity card, it allows the identification of each organism. So, we will be able to compare the reconstituted DNA at several hundred ki-

lometers with the DNA stored in the professor's refrigerator.

The experiment consists in realizing a high dilution which is made possible by introducing molecules in water then in carrying out successive dilutions until the elimination of the initial molecules. Here we are talking about a few DNA molecules removed from a patient infected with the AIDS virus. We take one volume of this solution and add nine volumes of water so that at each step we divide by ten the number of molecules present. Dilution is an integral part of any experiment involving the memory of water. A molecule is brought into contact with water and then it is removed by dilution.

In his experiment only an ounce of matter, namely just 2 nanograms, was initially used. By making this simple series of manipulations, we very quickly obtain dilutions in a way that there are no DNA molecules left but only water. If we went up to the 24th dilution it would amount to diluting a drop of the initial DNA in the Atlantic Ocean. This experiment will be done

in double blind. We try to pick up an electromagnetic signal coming from the different tubes placed on the sensor, then we digitize this signal in order to obtain a computer file as we would do for a sound; but these tubes contain only water.

Technically the tube is deposited for 6 seconds on the sensor then the digital file is recorded on the computer hard disk.

On observation, we detected an increase in the amplitude of the signal in the tubes that have been in contact with the DNA of the virus. They emit waves, whereas in conventional physics water itself does not emit waves. According to Professor Montagnier, the water in which the DNA has been strongly diluted has kept in memory traces of the original DNA, and it restores them in the form of electromagnetic waves. Biology and classical physics never consider such phenomena.

The rest of the experiment consists in transferring by in-

ternet, the MP3 file obtained, as an e-mail attachment and using it to reconstitute the DNA 1500 kilometers away in Italy, at the University of Benevento renowned for the quality of its molecular biology laboratory which has the ability to reproduce what Professor Montagnier does. The Italian team will start by performing the reverse operation of that performed by Professor Montagnier. The waves recorded in France will be read by the computer and sent in a tube of pure water. This tube of water will listen to these signals and memorize them.

Technically, a tube of pure water is put in the winding then the whole in this metal cylinder so as to avoid the interferences which could occur in the part. After that, one starts the reading of the file of the digitized waves and lets the water listen to this noise during approximately one hour.

It is the PCR technology that will then be used. This technology has revolutionized the work of molecular biology laboratories but also that of the police forensic department in the identification of criminals over the past twenty years. PCR consists in putting chemical elements into water, in essence elementary bricks called nucleotides which are the basic components of any DNA. To these bricks is added the polymerase, an enzyme which will act as a catalyst. Initially, these components remain inert, nothing happens. But if fragments of a DNA are introduced, then thanks to the action of the polymerase, the complete DNA sequence is reconstituted. We will then have enough elements to identify the owner of this DNA. In 1993, this phenomenon, the polymerase chain reaction, brought a Nobel Prize in Chemistry to its discoverer Kary Mullis.

But in this experiment, there is no physical DNA, just water that has listened to a signal from the Parisian DNA. So we shouldn't expect anything to happen because it is impossible for the DNA sequence of the virus to reconstitute itself without a model. It would be like making a photocopy without an original.

At the end of the experiment, the Benevento University team decrypts the PCR results on the screen. The observed bands are indeed DNA and it is a success. Finally, the last step was the expertise of an independent laboratory which compared the results of the two French and Italian laboratories which proved, through the results obtained, that the DNA transduction as well as the sequences were almost totally identical at 98%. And we can say this proportion of common elements is enough to reach the conclusion that the experience is a success. »

EXPLANATIONS AND COMMENTS BY THE JOURNALIST

In the specific world of quantum physics, there is no distinction between waves and matter. We consider an atom both as a particle, and a wave. And precisely, the memory of water tells us of a wave that has the same properties as the matter that would emit them. There is certainly a key to understand what is happening in Professor MONTAGNIER's tubes.

A possible application of the memory of water is not limited to the detection of a disease. In fact, the waves emitted and stored by water in contact with a molecule would then propagate the properties of this molecule and therefore its action.

If we admit the waves can act, we can also act through them and then treat by the waves.

This is a very empirical new field of medicine, but one day all this will be well integrated and we will be able to treat cancers by waves.

These applications are a direct result of the professor's experience in his laboratory. Imagine that instead of a DNA molecule, we introduce into water the molecule of a drug. We could, after high dilutions, record on a file the waves of this drug, then re-emit them in order to simulate its presence and therefore its benefits. This approach is totally revolutionary because so far classical chemistry establishes that molecules have an effect by contact between them but none whatsoever at distance.

It is quite possible to imagine and even to provide very soon a smartphone application that would

send information to your body so as to produce an effect. Steve JOBS considered that the smartphones would make it possible to cure oneself in the future. We're not so far from that.

Whether it is the detection of serious diseases, or therapies using drug waves, a new approach to biology is emerging, based on the information that waves could convey inside our cells. These are probably the first steps in digital biology that Jacques BENVENISTE already foresaw from the basement of his prefabricated building in the 1980's.

Those who wish to venture freely in this path of research should be able to do so, even if it means making mistakes, which is how science can advance.

EMMANUEL CARRIERE MD(AM), PhD(AM)

After having stated these scientific facts and current comments, I will refer to an older technology, just as avant-garde and in the same state of mind that Doctor Jacques Benveniste's. It will be necessary in understanding the results of my own experiments on digital biology.

LEADING THE WAY TO ELECTRONIC AND ELECTROMAGNETIC THERAPIES

Dr. Albert Abrams is the pioneer in this new technique of electronic medicine which uses appropriate vibration frequencies.

He was born in 1864 as the son of a major landowner in San Francisco.

During his youth, he went to Germany to study at the University of Heidelberg the precepts of a vibratory science which would later bear the name of radio-nics. The latter is defined as a science that consists in searching for the vibratory frequency emitted by different diseases, microbes

and viruses and then corrects the disturbances by using appropriate vibratory frequencies.

During his time at the University of Heidelberg in 1882, Dr. Albert Abrams met professor De Sauer who one day told him the following story:

While he was transplanting onion sprouts, he had forgotten a few uprooted bulbs next to another plant still in the ground in a nearby square. Two days later, the onions planted at the side of the square next to the uprooted bulbs developed a different growth from those at the opposite end.

For Dr. Albert Abrams, the roots of the onions probably emitted radiations, which was an unknown fact at the time, and these, by their vibratory frequencies, affected the onions left in the growth box on the other side of the square.

Inspired by this unusual experience, Dr. Albert Abrams decided to return to the United States with the aim of teaching at Stanford University an extraordinary

medicine where he learned to examine patients by simply jabbing them on the body in order to obtain resonances which he thought would reflect the subject's state of health.

During an experiment, Albert Abrams asked one of his subjects named Ivor, to get on a dais and remove his shirt facing west. He then gently tapped the young man above the navel and asked his students to record the sound. Then, to better argue his theory, he instructed a doctor to remove a cancerous tissue, fix it on Ivor's forehead and remove it before fixing it again. During this operation, Dr. Albert Abrams continued to pat Ivor's abdomen. The note changed from a clear to a muted sound each time the cancerous sample was attached to Ivor's forehead.

This observation will lead Dr. Abrams to state that some unknown waves emitted by diseased tissues could be absorbed and recorded by healthy human bodies. A series of electronic reactions produced by tuberculosis, malaria, streptococci, could affect

and be recorded on different regions of the torso of a healthy person like Ivor.

Each disease was transmitted to the person each time he tapped, and each time he got a different sound.

He reached the conclusion that the vibrations of the diseased cells in the sample had been absorbed by the subject's body, and that they had an effect on human cells.

Dr. Albert Abrams presented his theory in *New Concepts in Diagnosis and Treatment* (1922).

He also wrote *Human Energy* (1919), a book in which he shows how all things release energy.

The result of all his experiments will lead Dr Albert ABRAMS to manufacture a device that he will call Refléxophone. This device could emit sounds of different tones, and was able to interpret the waves produced by the diseased tissues. Several diseases were detected by a simple dial reading.

With this instrument, a disease could be diagnosed by examining a single drop of blood. (Hudgings, 1923)

To confirm this, Dr. Albert Abrams will conduct a special experiment. Before some forty of his future doctors, he demonstrated the reaction that would be triggered by the blood of a malaria-stricken person.

«Gentlemen,» he said, «if you were in the presence of a person with malaria, you would all give him quinine as a remedy. And why is that?» Faced with the general silence, Dr. Albert Abrams decided to place a few grains of quinine sul-

fate in the device which had contained the blood. He obtained a sound corresponding to that of malaria. Later, he decided to place the malaria-affected blood in the container with a grain of quinine wrapped in silk. This time, the sound that had given the muted tone of malaria produced a very clear tone. The radiation emitted by quinine had cancelled out the radiation from malaria blood.

Albert Abrams diagnosed his patients' health problems in person or at a distance. In the first case, he connected his device in which he put a drop from the patient's blood to the

patient himself. By jabbing him slightly on the stomach, he said he could send a vibration along his client's backbone, which he could then measure and trans-

form into a diagnosis. At distance, he compared the energy of a healthy person's blood to that of the patient, according to the procedure described above.

A wave emitter could annihilate the radiation emitted by all kinds of diseases. Dr. Albert Abrams eventually built an oscilloclast, with the help of an electronics engineer, Samuel O. Hoffman. This apparatus emitted specific waves capable of cu-

ring human diseases. It cancelled the radiations emitted by the various affections. As early as 1919, Doctor Albert Abrams taught its use to doctors who marvelled at such an avant-garde technology.

By placing a drop of blood in the oscilloclast and comparing the energy of the blood sample to the blood of a healthy person, one was able to see from what disease the individual was suffering.

The oscilloclast has come to be known as the «black box» (Williams 2000). Dr. Albert Abrams' treatment was simple: it was to send healthy energy to the affected areas so as to counter the negative energy. He called this way of proceeding «electronic» or «radio therapy», and his system, ERA (Electronic Reactions of Abrams). This first radionic instrument capable of reproducing calculated electromagnetic energies by opposing resistance to the radiation of the disease, captured the vibratory frequency and then bom-

barded the pathogenic element with the same frequency. The electromagnetic pulses to which the individual was subjected had the effect of cancelling the radiation of the disease.

In other words, the initial frequency of the disease is returned in phase opposition so as to cancel the effects of the radiation emitted by the disease.

Nowadays, this technology is one of the main components of quantum medicine bio-resonance devices that are fully capable of capturing, referencing and evaluating all the subject's vibrations and returning the information to be corrected in phase opposition in order to restore vitality and informational balance.

In the 1950s, Radionics was taken over by a Princeton graduate engineer, Curtis Upton, who wanted to know if the equipment invented by Abrams could be applied to agriculture. To convince himself of this, he was accompanied by a fellow university student,

William J.

Knuth, himself an electronics engineer by trade and who in 1951 tried an experiment around cotton fields in Arizona.

Curtis Upton and his colleague will stop by a cotton field and place on its edge a small machine the size of a portable radio set equipped with buttons and a telescopic antenna imagined on the bases of Dr. Albert Abrams' oscilloclast. They wanted to try a particular experiment by affecting the cotton field through a simple photo.

They took an aerial photo of the agricultural field, then placed this photo on a receiving tray fixed on the base of the device and next watered the photograph of an insecticide well known for its effect on the cotton parasite.

The purpose of the experiment was to rid the field of parasites without the use of commercial insecticides, but with a technique called radiant which projected the reagent onto the field through photography. And, as incredible as it might

seem, the field in question was rid of all its parasites. The radionic technology had worked well.

The experiment carried out by Curtis Upton will be taken over by another academic, Howard Armstrong, who, after taking an aerial photograph of a corn field attacked by Japanese parasites, will coat the photograph with rotenone, a small substance known to be devastating for this type of insect parasites.

Like Curtis himself, he will place his picture coated with the substance on the tray at the receivers of a radionic device and after a repeated treatment lasting 5 to 10 minutes with the buttons of the device turned on the specific graduations, more than 90% of the parasites had disappeared from the field. Fortified by this success, Upton, Knuth and Armstrong will join forces to found a company which will bear their names and start manufacturing radiant energy devices they will sell to different farmers.

The new generation of devices resulting from this research was called the generic name of radio devices. The principle of these devices is schematically similar to that of the radio station, and is based on the use of frequencies.

THE DIGITAL BIOLOGY APPROACH

In today's world, thanks to new technologies and technical advances, we are able to advance further in the techniques of helping and accompanying the person.

The genius of our ancestors is an excellent database of discoveries and wisdom that our current inventors have put to good use. (Russian, German...).

My approach focuses on

listening and observing the subject so as to really resonate with it. During my years of training and experience, I have noticed that it is our environments, whatever they are, that shape us through the multiple information they send us.

We must be aware of how much one and only one piece of information, just as one and one only meeting can change our lives (a

personal, professional meeting, the announcement of a profit...), therefore our inner weather.

I deepened my knowledge by perfecting my understanding of informational medicine, which in turn gave rise to a combination of different techniques in approach and evaluation. I was particularly interested in biological decoding because it allows me, through

the symbolism of diseases and their symptoms, to trace back their origin and thus their cause.

The use of the spirit of ultra-high dilution remedies, combined with Voll's organometer and Chinese medicine allow me to solve the memories, the true heritage of the individual, by deprogramming him in order to free him and reprogram him anew.

It is by the use of the Voll organometer that for years I have been able to discover to what extent an informa-

tely the measurement of conductivity and resistance of the main acupuncture meridians at one's fingertips. We clearly observe how the vibration of a simple highly diluted matter, i.e. with a total absence of matter containing simple information, can have an effect on a wide spectrum of interventions ranging from the physical body to the various subtle bodies.

This observation stimulated my curiosity and led me, year after year, to deepen

my research on the subject of information transmission. Instead of using a medical remedy, I wondered why not produce one's own remedy, with one's own information, using bio-resonance, quantum medicine based on the technological combination described by Drs Abrams, Benveniste and Professor Montagnier.

For a few years now, I have been developing a technological protocol destined to

design personalized digital remedies, which I have experimented for several years on myself and then with volunteers.

These informational remedies are designed from a personalized digital programming which leads, in absence of any resistance, to the transformation and release of physical, physiological, psychological, emotional, and environmental barriers in order to program a serene future with objectives, goals and a very precise purpose.

Voll Organometer

tion is able to free a person. It allows to visualize concre-

developing a technological protocol destined to

DESIGN AND VERIFY A CUSTOMIZED DIGITAL REMEDY

The objective will be to design a digital remedy and verify that it conveys the original information. For these experiments, I will use the following material product: GAULTHERIE essential oil supplied by the EONA laboratory and the isotonic plasma supplied by the QUINTON laboratory.

According to me, the work of Dr Benveniste and Professor Montagnier is an excellent basic premise. I choose these same techniques: first of all, I use the digital copy of GAULTHERIE, then the ultra high dilutions in order to highlight the positive dilution for extraction of the digital signal, and finally a contemporary electronic radionic bioresonance device (CORE INERGETIX SYSTEM) to design an entirely digital GAULTHERIE.

The aim is to create a personalized digital remedy with very precise sentences that resonate with our lives, our intimate projects, our daily lives. For example: «I'm recognized and loved for what and who I am», «I free myself from the trauma of abandonment», «I give priority to myself in life», «I'm full of vitality», «I attract everything that is good for me and that corresponds to me», «I love myself, I respect myself and I am gentle with myself», «I am protec-

ted from people and energy-consuming situations», «I am fulfilled in my professional and emotional life», «I move to the seaside», «I meet the man or woman who corresponds to me», «I live in abundance»...

To transform our vibratory state is to change our inner environment, our aquarium, because we are mainly composed of water. At both ends of our lives, these percentages differ: the

percentage in the weight of body water varies between 85% for a newborn baby - upto 93% for a three-month-old embryo - and 65% for an elderly person. This body water represents 99%

of the number of molecules that make up our body. This water is very similar to seawater. At the beginning of the 20th century, a great scientist by the name of René Quinton highlighted this marine aquarium by the similarity of isotonic seawater (mixture of spring water and seawater) with our inner environment (its biocompatibility with our blood). It is called water or Quinton Isotonic plasma. It is this water that I use in my experiments to be as close as

possible to our constitution. Since we are a «marine» aquarium, it might better be clean, pure and pleasant. It is important to maintain it as you maintain the aquarium of your fish. It is necessary to have good environmental conditions for life to develop as it is much healthier to shower in fresh, pure water, or to dive into a clean pool. So it is obvious that we must pay attention to the memories and programs it conveys.

The purpose is to Correct our inner program (with a personalized digital remedy). In other words, to update our life program, as we update a version of an operating system, to transform the course of our history and that of our descendants, in order to avoid repetitive and transgenerational patterns.

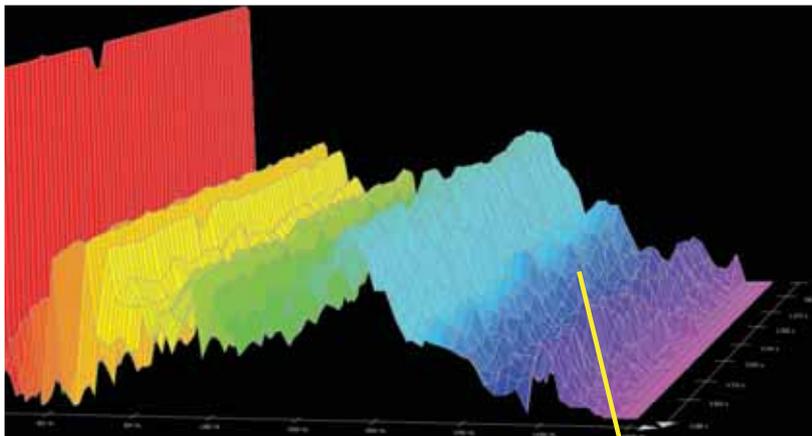

EXPERIENCES, DEMONSTRATIONS

The digital duplication experience of GAULTHERIE is identical to Dr Jacques Benveniste's protocol, i.e. by copying the original liquid matter (GAULTHERIE essential oil) via the copy/duplication process through an electronic and electromagnetic sensor.

In my demonstration, I observed that a positive signal is detected between the vacuum sensor signal and the sensor equipped with the GAULTHERIE essential oil bottle, as shown in graph number 1 below. It is therefore possible to retrieve its audible sequence, which can be recorded in WAV or MP3 format.

Chart 1

The experience with the ultra-high dilutions of GAULTHERIE.

Same as Professor Luc Montagnier's protocol, i. e. by successively diluting the original liquid matter (essential oil GAULTHERIE) from tube to tube, while recording each dilution with an electronic and electromagnetic sensor.

In my demonstration, one can observe the highlighting of a positive signal from the dilution tube number 8 as shown in graph number 2 below. In that way we can recover its audible sequence recordable as WAV or MP 3.

Dilution assembly

The experience of creating the GAULTHERIE digital remedy

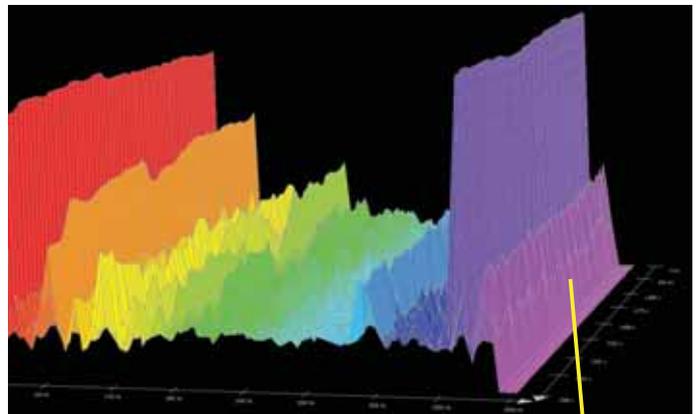

Based on Dr. Albert Abrams' Radionics research and discoveries and using a modern, contemporary electronic radionics system, I enter the name GAULTHERIE into a computer system connected to the radionics system that transmits the GAULTHERIE informational signal into a water tube, signal that is received on the electronic radionics equipment.

In my demonstration, one can observe that a positive signal is detected between the vacuum sensor signal and the sensor equipped with the water tube containing the GAULTHERIE information, as shown in graph number 3 below. It is therefore possible to retrieve its audible sequence, which can be recorded in WAV or MP3 format.

Graph 3 and the results

In my three experiments I observe three different ways of retrieving GAULTHERIE information: by digital copying/duplication, by the process of ultra high dilutions and by computerized radionics.

It is like a radio station (for example, on RMC, France INFO, INTER...) that will broadcast programs, songs... at a certain frequency in northern France. You can always listen to the same shows, songs, in the south of France but on another frequency. It is the same thing for this experience: the message is the same but it is transmitted on different frequencies (at different levels), because we have several entry points in our body, whether they are physical, mental, emotional, energetic or subtle. This message is received, then interpreted, sometimes integrated or rejected. Regardless of its medium and point of entry, what matters is the information it contains. These

results reassure me and are very encouraging in what I have observed since my early beginning with the Voll organometer. Namely, that a product highly diluted in water (with no matter) emits information validated by the result of Figure 2, using Professor Luc Montagnier's technical protocol of DNA transduction. Also, that it is possible to make a digital duplication like Dr. Jacques Benveniste, but especially, by going further with electronic radionics (see Figure 3), the observation is unequivocal: the computerized name of the matter product has been transmitted by the electronic radionics device, in the water tube, hence the design of an entirely digital product from one end to the other.

For a few years now, this technological protocol, which I designed to create personalized digital remedies, has been experimented, both on myself and on volunteers wishing to transform themselves

and get rid of obstacles, mental blocks and injuries (physical, personal, professional, environmental) due to our ancestral memories and family heritage... The results observed and the objectives achieved on volunteers who have drunk their remedy flask designed according to the GAULTHERIE digitization protocol - see graph number 3 - are more or less long-term (4 to 11 months) depending on the individual's rhythm.

The information contained in the digital remedy then becomes obvious.

It is therefore possible to design a fully customized informational remedy using current technology. It is also possible with Dr Jacques Benveniste's technique to design a digital duplication of the matter product which can be for example, if we are ill, using our own saliva, our own blood... in opposition to phase.

OPPORTUNITIES FOR THE FUTURE

This new informational, vibratory, digital medicine, digital biology, has allowed me, since several years I've been experimenting with it, to observe transformations in each individual I was able to accompany in his/her life course. Naturally, the rhythm of transformation and change is particular to each individual. Nothing is as powerful in a treatment as the moment it is fully personalized and completely adapted.

It is for this reason that when the individual puts intention into it, when he puts all his faith into it, then he goes beyond his own laws, and beliefs and transforms them. As a result, he overcomes the trials and obstacles he encounters, a true liberation from conscious and unconscious conflicts occurs as much in his body as in his soul and spirit. In the same way, he delivers himself from his own history in order to achieve his objectives and program himself for success. A whole program that can be put into one's personalized remedy.

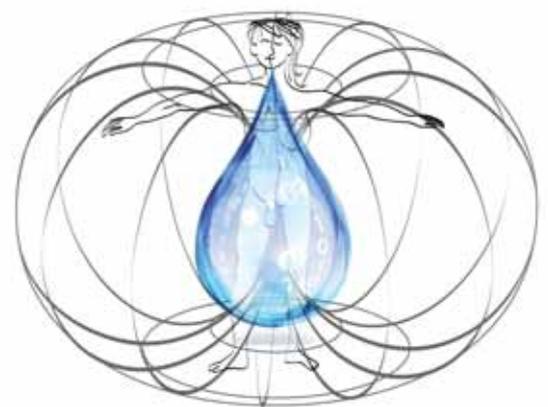

This shows that if we are in cohesion with ourselves, we really overcome our difficulties.

Like every form of life on this earth, we release vibrations, an electromagnetic field but also a melody, as demonstrated in the various experiences described above. Our human capacities, intuitive and spiritual, allow us to interact on our environment with our mantras and prayers, if and only if they are repeated for at least forty days or preferably even more. As the power of a remedy in ultra high dilution, of a digital remedy that has the same properties, the effectiveness of our prayers, meditations, mantras, positive thoughts and mental imagery doesn't make any doubt whatsoever...

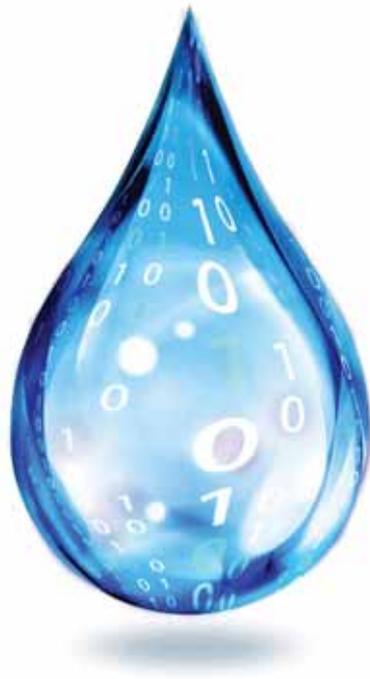

We are our best therapist, and our self-healing power is immense, as long as it is stimulated and awakened.

We could even make our own remedy on the same principle as radionics, by programming our water and strengthening its action through prayer, meditation or any other form of thought.

All these techniques are effective but they remain alternative and complementary to official, conventional medicine. It is fundamental and essential to be well accompanied by a health professional with humanity, in listening and common sense. All approaches are good as long as we have the will to evolve and change things in order to gain serenity at all levels.

LET'S MOVE TOWARDS INTEGRATIVE MEDICINE

**«All truth, all novelty» goes through three stages.
First, it is ridiculed. Then it is strongly opposed.
Then, it is considered as having been obvious. »**

Arthur Schopenhauer, 1788-1860 German philosopher,

Emmanuel CARRIÈRE MD(AM), PhD(AM) is a practitioner and researcher in alternative and complementary medicine, he holds a French degree in Heilpraktiker Naturopath Practitioner and two Indian degrees, Doctor of medicine in Alternative medicines MD(AM) and Doctor of Philosophy in Alternative Medicines PhD(AM).

He has been practicing since 1996 and has trained in France, Switzerland and India in several therapeutic techniques. His skills are multidisciplinary, mainly: homeopathy, hypnotherapy, naturopathy, postural balance, Chi Nei Tsang, informational medicine...

Since he has been practicing the relationship of help and accompaniment through alternative therapies and techniques, he has become more passionate about beings, their identity, their life stories with their symbolic compensations which can manifest themselves through symptoms, discomforts and diseases.

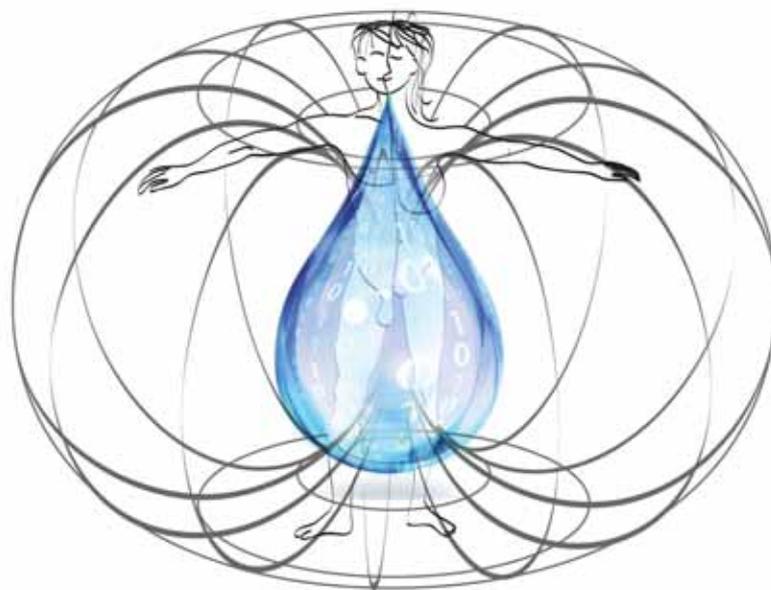

He made it his specialty, because he quickly understood that everything is driven by our inner weather, emotional rhythm, conscious and unconscious communication. In the first place, it leads to the creation of an informational therapeutic approach that he calls homeoresonance, which is the marriage of several techniques based on homeopathy, «sequential therapy» and Voll's organometry. He combines all these techniques with biological decoding, memories, symbolic compensations and Chinese energy physiology.

This complete and precise therapeutic approach intervenes on the global aspect of the individual, it allows him to better understand himself in order to free the conscious, unconscious conflicts, mental blocks, and resistances that he can have in him. Its field of action is vast and specific.

This goes from our daily lives, to the memories of family transmissions, to traumas that have occurred in utero, but also events such as an unexpected emotional shock, illness, surgery, death, break-up, etc.... Once this identification is made, the erroneous program that we had in us, physically, psychically and subtly, is corrected once and for all, while respecting the individual's rhythm.

The observation of the excellent feedback of experiences over the past few years, lead him to do research based on the work of water memory. It ended after several years of research, experimentation and testing, by developing a technique leading to a fully customized digital remedy based on digital biology and alternative techniques. It is this elaboration technique that is currently being used.

It is towards preventive and integrative medicine that he now directs his work, consultations, projects and research. On the other hand, he shares his skills, discoveries and knowledge in conferences and different media in order to raise awareness and promote exchanges between different therapeutic approaches.

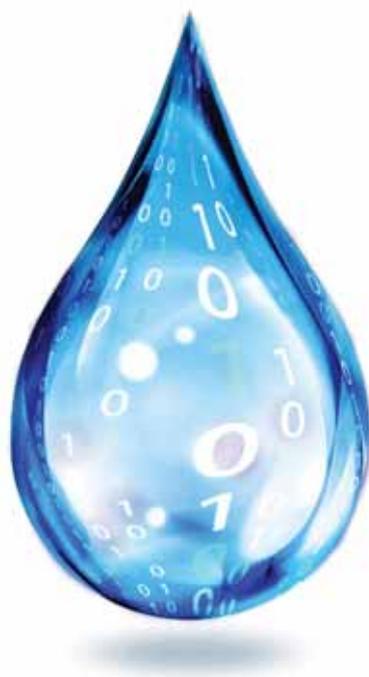

Emmanuel CARRIÈRE

DIGITAL BIOLOGY, IT'S REAL AND CURRENT.

The possibilities of seeing a mobile application likely to send an information to your body so as to have an effect on it is quite conceivable nowadays through the experience I demonstrate.

Whether it is the detection of serious diseases or therapies with drug waves. This new approach to digital biology focuses on the information that waves carry within our physical and energetic bodies.

This is the one I have been experimenting with for a few years now, with more than promising results.
